

August 24, 2001 MDA #117 VOLUME 26 No. 34 PUB. Weekly

## **MARKET ANALYSIS - August 23, 2001**

James Downes-Specialist University of MD Cooperative Extension

The grain markets were mixed for week ending August 23rd with soybeans down, wheat up and corn holding about even. The corn and soybean crop are maturing very fast and will be completely made very soon. The major news will shift from weather to harvest progress and grain demand. Corn futures held about even for the week, even though most of the news was somewhat friendly. The combination of good export sales and lower 2001 yield estimates should have led to positive price moves, but did not. Good to excellent ratings were down 3% last week, but should not drop much since the corn crop is maturing at a fast pace. Corn progress is about 10% ahead of the 5 year average. The corn traders feel that not much can happen to further reduce yield and buyers are in a "wait & see" attitude. Attention will be on demand news and the export picture. Soybean futures were down sharply for the week, mainly on good weather news that should lead to an excellent podfill. Even though soybean ratings are expected to improve next week, beans should receive some support from lower yield estimates and positive export sales. Most analysts expect 2001 soybean yields to be about 1-2 bushels lower than the last USDA estimate. Wheat was the only grain up for the week, experiencing some technical support and commercial buying. In addition, wheat export sales are improving. One negative in the wheat market is the large deliverable wheat stocks. The first delivery notice will be going out the end of this week.

## WEEKLY CROP SUMMARY

## MARYLAND AGRICULTURAL STATISTICS SERVICE

Maryland received rain again last week, with significant amounts measured in southern parts of the state. As a result, farmers spent an average of 5.4 days on **field work**. Large amounts of precipitation were measured in the Wicomico, Somerset, and Worcester counties of the lower Eastern Shore receiving 2.9 inches, 2.8 inches, and 2.7 inches of rain respectively. Northern counties, like Harford County, received closer to 0.4 inches of rainfall. Some vegetable damage was reported due to the wet weather conditions, especially in areas that received excessive rain. The flooded fields in these areas complicated melon harvest in particular. Fifty-eight percent of the **cantaloupes** have been harvested, 20 percent behind last year, and 21 percent behind the five year average. **Watermelons** are 39 percent harvested, 10 percent behind last year and 27 percent behind the average. The recent rains from last week and previous week have restored most areas to adequate or surplus amounts of soil moisture. **Topsoil moisture** is rated 21 percent surplus, 59 percent adequate, 19 percent short, and 1 percent very short. **Subsoil moisture** is now 7 percent surplus, 71 percent adequate, 14 percent short, and 8 percent very short.
